9. Weldom - Germany

WELDOTHERM® GMBH Essen is one of the leading manufacturers of Heat treatment equipment worldwide and offers special solutions for all Kind of thermal engineering. It is specialized in the development and fabrication of consider proven, site compatible and largely supervision free heat treatment units, high quality and solid heating elements and all related measuring equipment.

<http://www.weldom.com>

10. Ipac - USA

IPAC additives help lubricants protect engine and other moving parts from wear, deposits, corrosion, water and high operating temperatures. Our additives are used in oils, fluids and greases to meet the most stringent oil industry and original equipment manufacturer (OEM) Products specifications.

<http://www.ipac-inc.com>

11. GemmeCotti – Italy

GemmeCotti has been producing pumps for acids and dangerous liquids, mixers, filters and compressors since 1992.

GemmeCotti pumps are used for special applications: Chemical Industry, Petrochemicals, Pharmaceutical Industry, Oil Refinery, Electroplating, Electronic Industry, Photography Industry, Military Industry, Water Plants and others.

<http://www.gemmecotti.com>

12. Micronics Ltd - UK

Micronics Ltd commenced trading in 1985 and was set up to design and market "Clamp-On" ultrasonic liquid flow meters for industry and commerce. Since its inception Micronics have sold clamp-on water meters in more than 50 countries, concentrating mainly on portable "Time of Flight" meters, some of which are marketed under the registered trade name of Portaflow™.

From the introduction of the first portable instrument the company now markets a range of 13 different products incorporating "Time of Flight" or "Doppler" technology. The range includes portable instruments and fixed meters based on the use of non-invasive ultrasonic sound transmission to detect liquid flow velocity within closed pipes or open channels. There are Energy options for clamp-on fixed meters, tank and level meters are also available

In addition to product supply Micronics offer flow measurement solutions, combining the Micronics product range with Flow Analysis software and expert staff to conduct flow surveys.

The Micronics product range is also available on a competitive hire basis to provide emergency cover for failed meters and provide customers with the tools to undertake their own short term flow survey work.

Micronics are specialists in Ultrasonic Flow Meters with a tradition of innovation and a well established world position.

<http://www.micronicsflowmeters.com>

13. The Helmut Fischer Group – Germany

HELMUT FISCHER is a leading specialist in solutions for coating thickness measurement, material analysis, micro hardness and material testing. The company was founded in 1953 by Helmut Fischer and is owned by the Helmut Fischer Foundations in Sindelfingen, Germany and Hünenberg, Switzerland since 2008.

At its first headquarter in Sindelfingen, Germany; the company has about 160 employees. They are responsible for research and development, production, technical support, service as well as sales for the markets in Germany, Central Europe, Eastern Europe and North America.

About 150 employees work in their several own branch offices.

<http://www.helmut-fischer.de>

14. Nobel Company - Italy

A well known Italian co. at the field of manufacturing the reverse osmosis water plant (ROWP) for more than 20 years.

The special and high level designing gives the company the possibility of manufacturing multi sizes of such plants that have quite efficiency, durability and long life.

Nobel co. serves its clients with technical support through the after sell services with possible lower cost. The company has ISO certificate 9001/2008.

Nobel Company manufactures all the plant parts like:

Filters (all types & sizes), softeners, deionizers, R.O sets and all types of pumps related to.

<http://www.nobelitaly.it>

15. M & J Company for folding plastic tanks,(M & J Networks-Korea)

It is one of Korean companies specialized in the manufacture of flexible - folding water tanks of the material (PVC), which is characterized secured and convenient way to store, transfer and distribution of drinkable and non – drinkable water, as well as fuel , oil , chemicals and food oil tanks .

These water tanks are characterized process characteristics and ease of transport and reduce the cost particularly for projects that require large amounts of water consumption of agricultural projects such as irrigation and animal husbandry and construction projects and engineering as well as the various plants and factories. There are two types of materials used in manufacturing, the first is the material tarpaulin polymeric-type (PVC), used in the manufacture of non - drinkable water tanks, and the second is a substance tarpaulin polymeric-type (Dinch) used in the manufacture of drinkable water tanks. Ranging from sizes of (600 liters – 18000 Liter) for non-drinkable water tanks, while ranging sizes of (1000 – 200,000) for drinkable water tanks. Shall be installed and paste parts of the water tank with each other using high-frequency welding method, which provides strong and accurate sealing.

Estimated life of the product between (5 - 10) years, depending on the method and degree of application instructions and guidance to use correctly. the fittings tools made from aluminum material and polycarbonate propylene with sizes of (2-3-4 inch), and the valves are four kinds; ball valve and gate valve , control valve, plus decompression valve measuring (2-3 inch),the tank folded inside a bag with instruction manual and a box of maintenance.
